

Reference applications for HERE Tracking

Showcase the end-to-end functionality of HERE Tracking

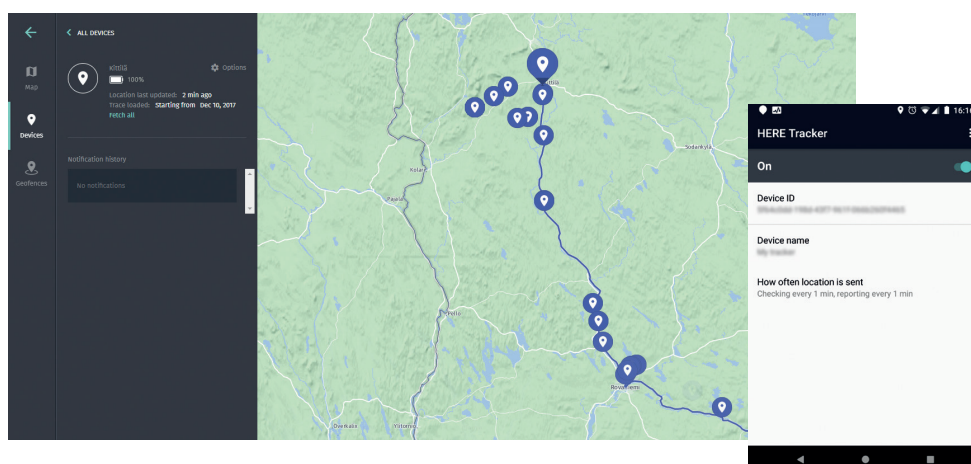

Web Reference Application (Dashboard)

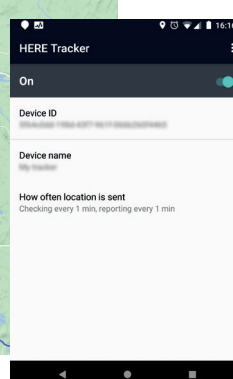

Mobile Reference Application (Device View)

Web Reference Application (Dashboard)

Mobile Reference Application (Device View)

For end-to-end functionality of HERE Tracking (HERE's tracking service offering that quickly enables the location of devices or the tracking of goods), the product includes responsive web and Android reference apps to get started to set up custom dashboards for different customer needs. The reference applications have a core functionality integrated which allows users to have full flexibility for their specific use cases.

Both the web and mobile applications can be easily co-branded or customer branded with HERE's white label design and can be easily modified by licensed customers. The web and mobile application can offer a generic experience for customers, but the web application is geared towards logistics asset tracking use cases and the mobile application is geared more towards consumer tracking use cases.

Reference applications for HERE Tracking

Feature Highlights

HERE Locate is the mobile reference application which allows users to claim and setup trackers or devices, setup geo-fences and monitor the trackers positions and movements. This reference application is beneficial for users to customize per their specific needs and have control over their assets.

Features and Benefits

The reference apps for HERE Tracking are available as a mobile application (Android) or a web application and can be accessed at app.tracking.here.com.

Web reference application

- Flexible and powerful dashboard view for various mobile asset tracking use cases
- Dashboard widget framework enables easy customizations and extensions
- Detail overview of Tdevice data for deep insights

Mobile reference application (HERE Locate):

- Signing-in and claiming “Trackers” to my account
- Locating “Trackers” in real time
- Granting access privileges to other users
- Showing historical location traces
- Creating Geofences and receiving notifications
